

Unmatched Water Savings on Display in the Arizona Desert

ShockWater ReGeneration Performance Report

Industry-Leading Car Wash Water Savings Surpass Expectations

When Cobblestone Auto Spa installed a ShockWater ReGen V system at its Glendale, Arizona location, the initial results were more than what they'd hoped for. "I expected to save maybe 20 percent on water," said Jonathan Van Donselaar, Cobblestone General Manager. "We immediately saw savings of 50 percent and we regularly see numbers below 13 GPC (gallons per car). From performance to their engaged support, ShockWater has been fantastic."

The location serves an average of nearly 300 cars per day, and management selected ShockWater CarWash Systems as its water treatment partner to achieve their water conservation and cost savings goals. Over a recent three month period, the Glendale location reported fewer than 15 GPC 80 percent of the time, including 28 days with a GPC lower than 10.

Reporting Period: November 1, 2024 - January 31, 2025

11.6

Average Daily GPC

5.2

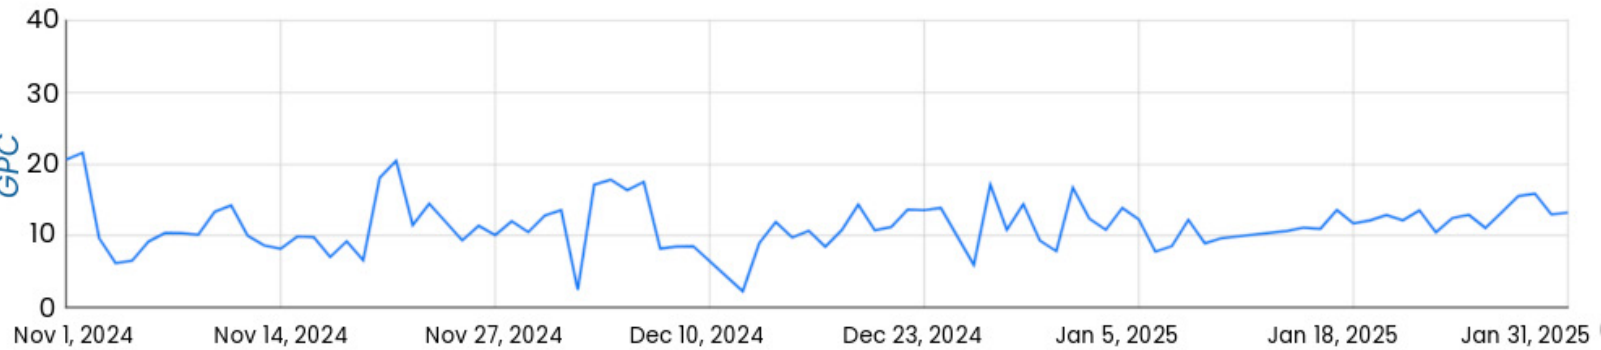

Lowest Daily GPC

74

Days Under 15 GPC

0

Days Over 22 GPC

"The results speak for themselves: There is simply no other water treatment system that can do what ShockWater does."
